

GLPI-PROJECT - Bug #4042

Definitely fix the requirement of getSingular for getTableForItem type

11/22/2012 01:42 PM - webmyster

Status:	New	Start date:	11/22/2012

Target version:	Unplanned		

Description

It is very complicated to deal with getSingular before getPlural for getTableForItem type.
Actually, Alias transform first to Alia that is transformed to Alias ...

What are those "States case" for which we require to call getSingular ?

Shouldn't we use a specific case for those States case by using getTable override method inside the case, instead of disturbing the main case ?

I can try to work on it, but I have to understand those "States case"

History

#1 - 11/22/2012 01:49 PM - moyo

States case : think it was when States is used in search. But it was deleted.

So I think this case is not needed.

getsingular of alias must return alias. there is a specific case for that on getsingular.

Yes, I have fixed this small bug (accidental removing of character in array affectation - rev 19703)

But removing this getSingular should simplify things.

#3 - 12/02/2012 02:28 PM - moyo

But how ?

#4 - 12/02/2012 02:58 PM - webmyster

Well, I know less than you on this subject.

Actually, I've posted this ticket because of the bug I have seen and solved (rev 19703).

But this getSingular/getPlural imbrication helped me discovering this bug.

Now that this bug has been solved, we may change the target version of this issue to unplanned or later version.

#5 - 12/18/2012 12:02 PM - moyo

- Target version changed from 0.84 to Unplanned

#6 - 02/12/2014 02:36 PM - moyo

- Category set to Framework
