Description			
<p>When a field has been deleted, the index of this field may remain in display preferences and cause an SQL error. This error breaks the display of a list.</p> <p>Workaround here : http://www.glpi-project.org/forum/viewtopic.php?pid=175434#p175434</p>

- Status changed from New to Assigned

The display preferences in GLPI relies on indexes. Each field has it's own index and should not change.

Customfields is designed such a way a field may have different indexes during it's lifecycle. This should be rewritten.

When a field is deleted, customfields should delete it from all display preferences.
