

GLPI-PROJECT - Bug #5125

Collect of emails with single part

11/14/2014 09:27 AM - orthagh

Status:	New	Start date:	11/14/2014
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:			

Description

Detected in glpi 0.83, but i think trunk is affected.

In case of mails with only one part (only an attachment), the attachment is not saved as document.

The "Fax to mail" gateways create this type of mail.

In attachment of this issue, a source of a mail with this particularity and a naive patch who avoids the problem.

the \$param in getRecursiveAttached function equals NULL in this case and the \$message after imap_fetchbody(..) contains the full content of mail instead of the attachment.
