Description	
<p>Dear Developers from GLPI,</p> <p>firsty i want to say that your system is really great :-)</p> <p>i have an important question. Can you implement the main manu item "servers" into the menu "inventory"?</p> <p>Because we want to seperate servers from normal computers!</p> <p>Please give me an answer...and THANK YOU!</p> <p>Greetz, Christina!</p>

We discuss about it.

We don't know when and who would does it for the moment.

It needs a deep reflexion to know what to put in the server inventory section.

Hi,

It will be nice to think about virtual server on host server....

Thanks.

#3 - 09/17/2006 06:47 PM -

I would like to put my two cents worth in about this issue. I do not consider this being a valid hardware type since it's very hard to differentiate between different computer types nowadays. I would rather add a ROLE entry on the normal computer object and there a user can specify his or her own roles for the computer (SERVER etc).
